Synthesis of Propyl Caprylate via Fischer Esterification

Aidan Leonard, Dr. Kawagoe, Dr. MacPherson

03/05/26

1 Introduction

The objective of this experiment is to synthesize propyl caprylate via Fischer Esterification by reacting absolute 1-propanol with caprylic acid in the presence of catalytic concentrated sulfuric acid. The product will be characterized and analyzed by odor analysis, ATR-IR, 100 MHz ^{1}H NMR, and GC-MS.

2 Reaction Scheme

Figure 1: Reaction of Caprylic Acid and 1-Propanol

3 Table of Reagents and Products

Compound	MW (g/mol)	Density (g/mL)	B.P (°C)	Equiv	Amount	mmol
Caprylic Acid	144.21	0.91	237 - 239.7	1.0	6.704 g / 7.37 mL	46.5
1-Propanol	60.10	0.803	97 - 98	3.0	8.38 g / 10.44 mL	139.5
Sulfuric Acid	98.08	1.84	–	cat.	5 drops	–
Diethyl Ether	74.12	0.710	34.6	solv.	–	–
Propyl Caprylate	186.29	0.866 - 0.867	225 - 226	–	8.66 g / 10.00 mL	46.5

4 Experimental Procedure

4.1 Apparatus

- Reflux
- Simple Distillation
- Rotovap

4.2 Procedure

- In a 25 mL round-bottom flask, add 6.704 g (7.37 mL) of caprylic acid followed by 8.38 g (10.44 mL) of 1-propanol and a stir bar.
- While stirring, add 5 drops of concentrated sulfuric acid.
- Gently reflux for 60 minutes, then allow the mixture to cool to room temperature.
- Chill the product in an ice bath then transfer the mixture to a separatory funnel using 15 mL total of diethyl ether to aid in the process.
- Quench the organic layer with iced cold DI water and collect the organic layer. Do this twice.
- Neutralize and extract the organic layer with small portions of a saturated sodium bicarbonate solution until the production of CO_2 gas ceases.
- Wash the remaining organic layer with a brine solution then dry the organic over anhydrous sodium sulfate followed by gravity filtration.
- Gently boil off the ether solution in a 50 mL beaker blowing a light stream of air over the top to obtain the crude propyl caprylate.
- Purify the product with simple distillation.
- Analyze the purified product by odor assessment, ATR-IR, ^{1}H NMR (100 MHz), and GC-MS to confirm ester formation and purity.

5 Purification Scheme

6 Results and Data

g of Caprylic acid	g of 1-Propanol	Drops of H_2SO_4	Reflux Time
